Skillls / languages

- Javascript
- Typescript
- CSS / Material UI

- React / AngularJS / Next
- SQL
- Git / Jira / AWS

- English
- Dutch
- German

Professional projects

Being part of a small team in a large company means I have had an intense and diverse introduction to the world of software development.
I have worked on both new and legacy software with data sensitive clients.

- Developed a dashboard for a council for their handling of their care clients. Used React / Typescript / RTK query / RTK / Mui.
- Maintained and added features to a variety of legacy products we have for high street banks. Involved in both FE and BE tasks.
- Currently working on rewriting an existing internal form for one of our bank clients. Both PM and Developer on this project.

We have applications in "old" and "new" React and in AngularJS, coupled with a Node BE with SQL for our database procedures served on an AWS platform.

Personal projects

My portfolio which I made before starting my current job. On the site are also links to older projects I wrote whilst learning to code.
Used React / Javascript / Typescript / Sass / Netlify functions.
Currently creating an eCommerce app for a relative.
Using Typescript / React / Tanstack Query / Mui / Firebase / Stripe / Netlify
